OXY-ACETYLENE OUTFITS

PROFESSIONAL MEDIUM DUTY WELDING AND CUTTING OUTFIT

CAPACITY

Cutting up to 6" (150mm)
Welding up to 3/8" (9mm) steel

FEATURES

Brass & stainless steel construction
torch handle with two stainless steel
needle valves for fast accurate flame
adjustment.
O-ring seals.
Forged and extruded brass for durability.
External torch mounted reverse flow
check valves.
Complete accessory package, hose,
lighter & goggles.

APPLICATIONS

Precise welding, brazing, soldering,
hard facing, heat/treating and priming,
straightening, deseaming and scarfing,
gouging, flame cleaning, rivet washing
and cutting.

CUTTING TIPS

Powerweld tips are precision machined from high quality copper alloys for durability. The gas passages for single piece acetylene tips are accurately swage-forged and shaped on polished mandrels for smooth, efficient gas flow. Two piece tips for alternate fuel gases feature an internal spline configuration that is of the latest design, offering the optimum in cutting performance. All tips are 100% flame tested.

REPLACEMENT GAUGES

- Premium quality replacement gauges are the industry standard.
- Polished drawn brass with one-piece impact resistant polycarbonate posilock lens.
- For use with compressed gas regulators, these gauges are an excellent choice for original equipment and replacement applications.
- Gauges are UL listed.

FLASHBACK ARRESTORS

POWERWELD TORCH & REGULATOR FLASH ARRESTORS

ITEM #	DESCRIPTION
PWFA10	Torch Set

Powerweld Flashback Arrestors provide essential protection for oxy-fuel welding and cutting operations. Designed to stop and extinguish dangerous gas flames travelling back toward equipment, they help prevent accidents and protect both operators and equipment. Each unit also features a built-in check valve to prevent reverse gas flow, offering a double layer of safety in a compact, easy-to-install design.

ITEM #	DESCRIPTION
PWFA30	Regulator Set

Models:

- **PWFA10:** torch set
- **PWFA30:** regulator set

Maximum Working Pressure:

- Oxygen: 145 psi
- Acetylene: 15 psi
- MPS Gas: 22 psi
- LPG, Hydrogen, Natural Gas, Methane: 50 psi

Key Safety Features:

- Gas non return valve (NV): prevents back flow of gas upstream of the arrestor
- Flame arrestor (FA): large sintered stainless steel element for repeatedly arresting flames
- Dust filter (DF): positioned on the inlet side
- Colour coded and clearly marked for oxygen or fuel gas
- UL Listed

Recommended Applications:

- Oxy fuel welding, cutting, heating, and brazing
- Welding shops, fabrication facilities, and field service work
- Applications requiring enhanced gas safety control, in accordance with ANSI 249.1 and ANSI/NFPA

PROPANE EQUIPMENT

AUTO IGNITE PROPANE TORCH

PWX-3B AIR ACETYLENE KIT

PWX-3B Kit

The Powerweld PWX-3B air-acetylene kit is designed for professional brazing and soldering. It includes two sizes of quick-connect swirl tips for soft soldering up to 3" (7.6 cm) and silver brazing up to 1-5/8" (4.1 cm). The ergonomic torch handle features rear valve control for precision, while the adjustable "B" tank regulator with a contents gauge and 12' acetylene hose ensures reliable performance.

PWG4 Torch

Lightweight torch offers superior comfort and precise flame control with a rear needle valve. Its quick-disconnect system allows easy tip changes and compatibility with most similar brands.

PWAR-B Regulator

Adjustable acetylene regulator ensures reliable performance with CGA-520 ("B" tank) inlet fitting and a contents gauge for monitoring fuel levels.

Powerweld Quick Connect Swirl Flame Tips

Powerweld swirl flame tips deliver a high-precision flame for soldering and brazing. The quick-disconnect design ensures fast tip changes and compatibility with most similar brands. Available in five sizes to suit a wide range of applications.

Designed to efficiently conduct the current through a detachable type connector. Brass bodies are precision machined. Cam action design allows lock in with a twist and pulls the two halves together tightly. Connector covers are resistant to heat, cold, abrasion, ozone, oils & solvents. Tapered ends lock out moisture, oil and dirt. Connector covers are specially compounded to be flame retardant.

- Positive lock-tight action
- Brass bodies are precision machined from heavy specially shaped brass extrusion
- Cam action design of male half connector pulls the two halves tightly together

GOUGING TORCH

For gouging, cutting, beveling, piercing and flushing metal. The Gouging Torch is designed to remove any kind of metal by the "Air Carbon-Arc" process which is more economical than older methods such as burning, chipping and grinding.

WELDING CABLE

Convenient Cut Length Cable in Boxes

PowerWeld carries inventory of the most popular welding and primary cable sizes in convenient pre-cut lengths of 50' and 100'. These lengths are attractively boxed and ready to go right off the shelf for clean and trouble free cable sales.

Flex-a-Prene® 30 AWG 600 volt all-weather grade welding cable is rated at -50°C to +105°C giving it outstanding cold weather flexibility. Made with a special jacketing compound, this standard stock welding cable gives you high flexibility without sacrificing weather resistance. **Flex-a-Prene®** welding cable is the first to meet **SAE J1127**, a standard that requires a minimum amount of copper per gauge. To meet this standard, the cable must also pass extensive tests against flame, heat, and cold. These conditions are similar to what welders experience on a daily basis.

TUNGSTEN ELECTRODES

Powerweld offers eight types of tungsten electrode to cover every TIG welding application. Electrodes are 7" (175mm) in length and packaged 10 rods per box. All tungstens have color coded tips for easy identification, and meet AWS A5.12 specifications. Electrodes are supplied with a smooth, round, bright centerless ground finish.

Type	Dia in. (mm)	Part #	Voltage	Composition	Materials Welded

MILD STEEL WIRE & COPPER FREE WIRE

Certified by CWB to CSA W48-Class ER49S-6

Specifications

AWS A5.18 Class ER70S-6

Description

S6 contains high levels of manganese and silicon for stronger deoxidizing power where stringent cleaning procedures are not possible. This wire has been designed to provide X-ray quality porosity-free welds and the highest tensile strength (as welded) of the plain carbon steel wires. The high silicon content increases the fluidity of the weld pool, creating a smoother bead appearance and resulting in minimal post-weld grinding. S6 is excellent where poor fit-ups or rusty and oily plates may be used.

Wire is precision level layer wound.

Applications

Construction work, tanks, truck bodies, farm implements, pipes, steel castings or forgings, shaft build-ups and general shop fabrications.

E70C-6M METAL-CORED WIRE

Powerweld E70C-6M is a metal-cored MIG wire engineered for high-deposition welding of mild and low-alloy steels. It produces a smooth, stable arc with low spatter, minimal slag cleanup, and exceptionally low fume levels, making it ideal for semi-automatic and automatic applications. This wire delivers a clean, attractive weld bead and offers excellent impact toughness and crack resistance, even at low temperatures. Suitable for single and multi-pass welding in flat or horizontal positions.

FLUX CORED WIRE

E71T-GS ALL POSITION

SELF-SHIELDING - GASLESS

Features

- No Shielding Gas Needed
- Single Pass Welding of Thin Gauge Galvanized Steel
- Excellent for Outdoor Use
- Smooth Arc – Minimal Spatter
- DC- Straight Polarity
- Works Well In Wind

Description

Powerweld gasless wire E71T-GS is an all-position, self-shielded flux-cored wire designed for single pass fillet and lap welding on galvanized or carbon steel as thin as 20 gauge, without burn-through. Gasless wire E71T-GS is commonly used on small portable 110 volt welding machines, offering smooth arc action with very little spatter. Travel speed is fast, penetration is good and slag removal is easy.

Applications

Powerweld gasless wire E71T-GS is most popular for the home workshop welder because it works so well on 110 volt machines and can be used on thin gauge steel. Gasless wire E71T-GS is used quite extensively in automobile body shops for door or body repairs and it is also used for sheet metal duct work on lap and butt joints.

NOTE: As with all self-shielded wires, **Powerweld** gasless wire E71T-GS does contain fluoride compounds, which require more attention to ventilation when being used to weld galvanized steel. The zinc oxide formed during welding should not be inhaled as it can cause metal fume fever. When welding indoors or in an enclosed area, be sure that the ventilation is adequate.

E71T-1C/1M ALL POSITION

Powerweld E71T-1C/1M is a rutile type flux cored wire designed for general purpose all position welding with 100% CO₂ or a 80% Argon – 20% CO₂ mixture shielding gas. Features excellent welding performance and higher welding efficiency than traditional welding wires with it's smooth arc characteristics, while producing low spatter and low fume emissions. Used for single and multiple pass welding of mild steel and 490 Mpa (70,000 psi) grade high tensile steel. Applications include structural steel fabrication, pressure vessels, bridges, machinery etc.

- Classification: E71T-1C/1M per AWS A5.20, ASME SFA5.20

MILD STEEL ELECTRODES

Powerweld 6011

Powerweld 6011 is a cellulose type electrode with fast-freezing slag for general purpose welding in all positions. Deep penetrating for use on painted, galvanized or dirty surfaces. Operates on AC or DC current

Applications

Used for general fabrication, structural work and galvanized sheet metal.

Powerweld 6013

Powerweld 6013 is a high titania coated electrode. This electrode provides good wetting and shallow penetration for thin sheet metal applications (using smaller diameter electrodes), but with sufficient penetration for welding medium gauge steel. PowerWeld 6013 is an all-purpose electrode that provides a soft steady arc which is easily regenerated, easy slag control for vertical-down welding, low spatter and a beautiful bead appearance. PowerWeld 6013 electrodes may be used in any position with AC or DC (straight or reverse polarity).

Applications

Powerweld 6013 is commonly used for automobile bodies, truck frames and bodies, ornamental iron, metal furniture, farm implementations, machinery guards, storage tanks, or wherever appearance is important or desirable.

Powerweld 7014

Powerweld 7014 is an iron power, rutile type electrode providing high deposition rates and fast travel speed. This electrode provides a stable arc, flat smooth bead appearance and easy slag removability PowerWeld 7014 is used for all position, single-pass and multi-layer welding applications. AC or DC (straight or reverse polarity) may be used.

Applications

Typical applications include: ship structures, bridges, structural steel for buildings, sheet metal, ornamental iron, auto bodies and fenders, machine parts, storage tanks, etc.

LOW HYDROGEN ELECTRODES

Powerweld 7018

Powerweld 7018 is a low-hydrogen electrode for use in all positions on low, medium and high-carbon steels. 70,000 PSI tensile strength. Ideal for out of position welding and tacking. Runs on AC or DCEP (reverse) polarity. Features a steady arc with low spatter and medium penetration, providing X-ray quality weld deposits.

Applications

Powerweld 7018 is typically used for heavy machinery fabrication, pressure vessels, field and shop welding of bridges and structural steels, cast steels and shipbuilding, or most ASTM specifications on medium carbon and low alloy steels.

Powerweld 7018AC is a low-hydrogen electrode for use in all positions on low, medium and high-carbons steels. 70,000 PSI tensile strength. Ideal for out of position welding and tacking. Runs on AC or DCEP (reverse) polarity. Specially formulated to operate with small 208/230 volt AC welders.

Powerweld 7018AC

Applications

Typical applications include general fabrication, tack and skip welds, and for welding thin sections of steel.

STAINLESS ALLOYS

STAINLESS MIG WIRE

308L - Powerweld 308L is used for TIG and MIG welding of unstabilized steels such as types 301, 302, 304, 305, 308. The average carbon content of 0.02% produces a weld deposit with good resistance against intergranular corrosion caused by carbide precipitation. This filler metal is the most popular grade among stainless steels, used for general purpose applications.

309L - Powerweld 309L is used for the welding of similar alloys in wrought or cast form. It is mostly used for welding dissimilar materials such as mild steel to stainless steel, as well as for a barrier layer in stainless overlays. It has low carbon content of less than 0.03% reduces the possibility of intergranular corrosion. For some applications, welding of straight chromium steels.

316L - Powerweld 316L is used to weld wrought and cast forms of similar composition, as well as low carbon molybdenum-bearing austenitic alloys. The lower ferrite level of this normal composition reduces the rate of corrosion in certain media and is suitable for use at cryogenic temperatures. The presence of molybdenum increases its creep resistance at elevated temperatures.

All grades meet specification ASME SFA5.9 and are certified by CWB to AWS A5.9

ALUMINUM ALLOYS

Precision made on the latest equipment from materials of the finest quality. **Powerweld** spooled aluminum wire is triple degreased to provide the highest degree for cleanliness and luster. The **Powerweld** "shaved finish" produces absolute uniformity in diameter along with excellent surface smoothness so as to guarantee uninterrupted feeding in automatic and semi-automatic operations.

Rigid quality controls in every stage of manufacture and packaging assure maximum welding and brazing efficiency and trouble free welding results. Unique cleaning methods remove all traces for oxides, lubricants and acids. Special packaging maintains absolute cleanliness and prevents contamination.

With state of the art, proprietary processes and advanced testing capabilities, **Powerweld** is recognized for our quality aluminum welding products.

LUBE PADS & LUBRICANT

LUBE PADS

Wire Lube Pads

Keeps MIG, sub-arc, and flux core cable conduits producing for up to 3 months without down time for cleaning. Eliminates erratic wire feed caused by dust, particles, and flashing being trapped inside conduit lines. Increase wire surface feedability. Wire lube pad lowers the coefficient of friction in conduits approximately 60% and increases life of wire feed units. Pretreatment of wire lube pads so they will not dry out or evaporate. Contains no solvents, abrasives, carbon, sulfur, nitrogen, moly disulfide or silicones. Non-toxic, non-flammable.

Economical and easy to use. Available in recloseable plastic boxes, 4 or 6 pads to a box with one clip. Wire lube pads can be certified for nuclear welding. Flexibility to use pad on both sides and on any axis. Private label program available.

Powerweld's Mig Lube Pads are engineered to apply Powerweld's lubricant (come pretreated). Reapply lubricant as necessary. Lubrication allows smooth feeding of wire with poor cast, excessive helix, rusty surface and long feed liners (over 10').

Features:

Lube pads are pre treated with Powerweld's lubricant. Lubrication allows smooth feeding of wires with poor cast, helix, rust and long feed liners. For Aluminum, use Powerweld's Untreated White Pads.

SWEATBANDS

MODEL	DESCRIPTION
	
PW3100V FOR WELDING HELMET	PW3200V FOR HARD HAT

Our innovative sweatband design has made wearing a helmet more comfortable, no matter what time of year it is. The pad has been field tested in a variety of industries and is proven to reduce "helmet head", to improve grip, and to provide maximum perspiration absorption. Made of 100% fleecy cotton and flame retardant, this product features an air cushioned inner layer made of thousands of small cells to hold excessive perspiration and a hook & loop fasteners to fit all major brands of suspender (hard hats) or non-suspender (welding and face shields) type headgear.

WELDING CURTAINS & FRAMES

Powerweld offers a range of curtains designed to protect casual passers-by from harmful radiation in industrial working environments. Arcs and sparks generated from welding and grinding are harmful to the naked eye. **Powerweld** 14 mil transparent vinyl welding curtains allow those outside of the workspace protection during periods of short-term visibility, dispersing the light generated by the arc while allowing light back into the workspace. All curtains meet CE EN1598-2011, ensuring acceptable transparency, reflectance, IRUV protection and flame resistance. Curtain panels and frames are sold separately.

FILLET WELD GAUGES

Powerweld fillet weld gauges are precision inspection tools designed to ensure quality and accuracy. Several models to choose from cover many applications. Features include:

- Precision gauge
- Constructed of rust proof 22 gauge type 304 steel.
- Die blanked to eliminate sharp edges - adds to accuracy.
- Permanently etched lettering for long life and abrasion resistance.

- Angle of preparation, 0° to 60°.
- Excess weld metal (capping size).
- Depth of undercut.
- Depth of pitting.
- Fillet weld throat size.
- Fillet weld length.
- Misalignment (high-low).

MODEL	STYLE
MG-8	BRIDGE CAM

MODEL	STYLE
MG-5M	PIT DEPTH

- Check undercut
- Check pit depth
- Check porosity

MODEL	STYLE
MG-11	FILLET

- The fillet weld gauge allows fast, accurate measurement of eleven (11) fillet weld sizes: 1/8", 3/16", 1/4", 5/16", 3/8", 7/16", 1/2", 5/8", 3/4", 7/8", and 1", and their metric equivalents, to determine weld sizes, either concave or convex.
- Each gauge blade is made of 1-1/4 "x 4" stainless steel to resist rust and bending.
- Blades are deburred to remove rough edges.
- All sizes and numerals are engraved into the surface for easier reading.

MODEL	STYLE
WG-06HILO	HI LO

- Slim design.
- Changes from standard to metric - simply remove gauge body, turn scales over and replace body.
- Measurements read in standard on one side & metric on opposite side.
- Measures internal alignment of pipe after fit-up/alignment, and cuts radiographic rejects.
- Measures internal misalignment of pipe before and after tacking.
- Measures bevel on end preparation.
- This handy device even measures scribe lines, socket welds, crown height of welds & fillet weld size.

MODEL	STYLE
DSG-01	DIGITAL

- Accurate readings instantly.
- Easy to read digital display.
- Zero setting at any position.
- Metric / Imperial system conversion any position.
- The digital welding gauge is equipped with an output port.
- Data can be input into a computer or a printer via special connecting cable.

Resolution: 0.01mm/0.0005"

Range: 0-12.7mm

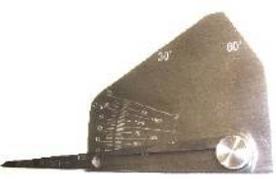

Error: +/- 0.03mm +/- 0.001"

Operating Power: One silver oxide battery SR44, 1.55V (Included)

Working Temperature: 0°C to +40°C

Humidity: <80%

Storage Temperature: -10°C to +60°C

MODEL	STYLE
WG-07SFG	SKEW-T

- For checking angle of vertical member.
- For checking weld acute side.
- For checking weld obtuse side.

MODEL	STYLE
MG-6	AUTOMATIC

- Check reinforcement
- Check the throat of fillet weld
- Determine the leg size of the fillet weld

LOCKING PLIERS

Powerweld locking pliers and c-clamps are made from nickel plated chrome vanadium steel for toughness and durability. Smooth turning screw adjustment provides maximum pressure and grip. C-clamp models are available with standard or swivel pad tips. Trigger release design for quick removal.

Powerweld Electrode Canisters

Powerweld electrode canisters are designed to protect your welding electrodes during transport and storage. Sturdy impact resistant construction holds heated electrodes up to 250°F (121°C). Square sided to stop from rolling around during transportation. Rubber O-ring makes a tight seal and resists moisture from entering the canister. Shape design and coarse thread make removal of the cap easy when wearing welding gloves. Holds up to 10lb (4.54kg) of electrode. Available for 14" (350mm) and 18" (450mm) electrodes. Every canister comes with a carry strap!

PW3200TG

The Powerweld **PW3200TG** handheld tungsten sharpening grinder provides precise preparation of tungsten electrodes. The specialized grinding fixture head is designed to accommodate 6 diameters of tungsten electrodes with the option of four precise grinding angles. Properly sharpened tungsten electrodes produce superior weld quality and reliable arc starting. PW3200TG has grinding, facing and cutting capabilities. A double-sided grinding wheel provides long term performance.

- **Input voltage:** 110V
- **Grinding angles:** 15° / 18° / 22.5° / 30°

PW18005TG

The Powerweld **PW18005TG** is a cordless tungsten grinder built for convenience, portability, and light-duty performance. Designed with the occasional user, DIY TIG welder, or mobile technician in mind, this economical unit delivers clean, consistent grinds wherever the job takes you. Powered by a rechargeable 8V lithium-ion battery and equipped with a durable double-sided diamond wheel, the PW18005TG offers reliable results at preferred angles of 15°, 22.5°, or 32°. Compact, user-friendly, and easy to maintain - it's the ideal solution for field work or occasional tungsten prep.

Powerweld layout and alignment tools are built for professionals who demand accuracy, durability, and ease of use on the job site. From magnetic levels and centering heads to flange aligners and burning guides, each tool is constructed with high-quality materials and designed to deliver consistent, reliable performance. Whether used for pipe fitting, layout, or alignment applications, Powerweld tools provide the precision and functionality needed to get the job done right.

FAST FIT FLANGE PINS

Powerweld Fast Fit Flange Pins provide fast, precise alignment of pipe flanges during fitup. Machined from high-strength steel with a tapered guide design, these pins deliver a secure and repeatable centerline every time. Each pin features a knurled handle for improved grip and a positive-locking nut to hold the flange securely in position during tacking or welding.

Key Features:

- Hardened steel resists wear and maintains strength under load
- Acme threads for quick, accurate alignment of pipe flanges
- Knurled grip for secure handling, even with gloves
- Quick release button allow the pins to be removed quickly and easily when the job is done
- Designed for use with flange holes from 5/8" to 1-5/8" (16 mm to 42 mm), maximum flange thickness of 6-3/8" (162 mm)

MAGNETIC CENTERING HEADS

Standard and large magnetic centering heads make it easy to mark centers on pipe from 1/2" in diameter and larger. Powerweld centering heads are crafted from lightweight, durable aluminum and feature a laser etched 180-degree adjustable dial and level marked in 2.5-degree increments and a hardened steel punch. Equipped with strong neodymium magnets, they provide secure placement on steel pipes.

- PWPTRM10** RADIUS MARKER SMALL UP TO 10" CIRCLE
- PWPTRM24** RADIUS MARKER MEDIUM UP TO 24" CIRCLE
- PWPTRM48** RADIUS MARKER LARGE UP TO 48" CIRCLE

Powerweld radius markers are made from durable aluminum and designed for fast, accurate layout work on pipe and flat surfaces. Each arm features a soapstone holder and adjustable tension joint for smooth, consistent marking. The small model marks circles up to 10" (254 mm) in diameter, the medium up to 24" (610 mm), and the large up to 48" (1219 mm).

PWPT12L

LEVEL UNIVERSAL MAGNETIC 12"

12" MAGNETIC LEVEL

The Powerweld magnetic level combines lightweight, durable aluminum construction with precision and versatility. It features laser-etched imperial and metric scales for measurements up to 12" (300 mm). Designed with fixed horizontal and vertical levels, plus a 180-degree adjustable dial marked in 2.5-degree increments for added functionality. Equipped with strong neodymium magnets, it ensures secure placement on any steel surface.

FLANGE ALIGNER

The Powerweld flange aligner makes flange fit ups quick and easy. It is made from robust steel and is hard anodized for optimal strength and lasting performance. The flange pins are threaded for ease of use. This unit can be safely used with flange holes from 1/2" to 1-7/16" diameter x 2-1/2"

HIGH-TEMPERATURE PIPE WRAP AROUNDS

Powerweld pipe wrap arounds are a simple and cost-effective solution for accurately marking straight lines around pipes or creating accurate edges for welding and cutting. All Powerweld wraps are made from a flexible and durable gasket material that is asbestos free and can withstand temperatures up to 550°F (287°C). All 5 stock sizes are printed with both metric and imperial measurement scales, pitch chart and tangent chart. Additional instructions for layouts of elbow and other fittings are also printed on the product itself.
